CORRIGENDUM

Experimental verification of a mathematical model for pelleted growth of *Streptomyces coelicolor* A3(2) in submerged batch culture

A. J. Tough and J. I. Prosser

Microbiology (1996), **142**, 639–648

Owing to a printer's error, the right-hand axis labels of Fig. 5 parts (c) and (d) (p. 645) were printed incorrectly: they should read 10^{-3} and $10^{-4} \times$ Pellet number, respectively, instead of $10^{-1} \times$ Pellet number. The correct version is shown below.

Fig. 5. Predicted changes in pellet radius (●), pellet concentration (◆), biomass concentration (■) and substrate concentration (▲) during batch growth of *S. coelicolor* A3(2) at agitation rates of (a) 250, (b) 500, (c) 750 and (d) 999 r.p.m.
